Vasilika

the community. The secretary tends to remain in office for many years, thereby becoming the equivalent of a permanent civil servant.

The president is held responsible for the completion of the tasks assigned to him and to his council. These include registration of births and deaths, a census of males every five years, the physical maintenance of the roads and public wells in the village, the preparation of the community tax rolls, and the preparation of an annual village budget.

In a community the size of Vasilika the maintenance of vital statistics is not an onerous task, since births, deaths, and the age and sex distribution of the population are matters of common knowledge. The maintenance of village property is a more complicated matter. Funds for materials are available in the village's account, which is held by the treasury at Amphiklia. The community may not draw on its account without the approval of the nomarch. Therefore, any public works program in the village is first formulated by the council and then sent for final approval to the nomarch's office. Village males who are more than fifteen years old are responsible for providing labor for road building and for minor repairs of village property. They may either give a certain number of days a year to work on such public projects or fulfill the obligation by furnishing money for a substitute. There is no effective practical way of enforcing adherence to the commitment. The state of the village roads and wells depends, therefore, on whether the village men are willing to work together to create a village asset.

In the course of our 1955–1956 stay at Vasilika a special impetus for road repairs presented itself. The council had requested that one bus a day traveling between Kifisokhori and Levadhia be rerouted so as to pass through the village. The nomarch had indicated that he would approve the change if the village road was repaired, and he authorized the necessary materials. One day in March, truckloads of earth were brought into the village and about one quarter of the adult male population shoveled the loose earth into the main ruts on the village road. The road was superficially improved thereby, and a month or so later a bus was routed through the village. The poor drainage from one of the wells was not corrected, however, so that the regular spillage from the well quickly restored the old puddles in the road.

The men and boys who worked on the road project lacked their customary vigor. Indeed, the majority of the male population of the village claimed to have work to do in the fields that day and did not join in the road work at all. There was much joking, teasing, and clowning while the work was going on, and the efforts of two of the older men to convince the group to set to work with a will were unavailing. The attitude of the road workers requires explanation because all the villagers were agreed on the importance of the new bus route and they actively dislike mud. The muddiness of the village road in winter and early spring was a particular subject for comment and several times evoked the question, "Do you have mud in America, too?" An Athenian who visited the village in late spring was critical of the villagers because their *aghora* was unpaved. "Don't you have a lot of mud all winter?" she asked. "Oh no, we don't have any mud in winter. Very little," was the response from one of the villagers. He would not even admit to so unsightly a condition.

than 400 stremmata of cultivated land. Presumably the owner had divided legal title among relatives or friends without surrendering real control of his land.)

The village is very small. In 1956 its population was only 130,[1] yet it occupies no less than 6,000 acres, excluding the absentee landowner's estate, which is counted as part of the lands of Lofiscos by official government reckoning. This amounts to more than 46 acres per capita; and even though more than half of the land remains rough pasture, subject to flooding for part of every year, such an abundance of land represents solid wealth by Greek peasant standards. And indeed, the village is wealthy. Farmers find little difficulty in accumulating gold sovereigns with which to dower their daughters, for wheat is always in demand and a government purchase scheme keeps the price stable and well above world market levels. In spite of the shabby appearance of their houses and the untidy appearance of their clothes, the families of Lofiscos are, by their own standards, very well off. Almost all of them probably have several hundred gold sovereigns hidden away, but this no stranger could ever expect to know.

The tribulations of the second world war, of the occupation and of the guerrilla war made almost no impression on Lofiscos. The young men served in the army, of course, and saw something of the outer world. But on their return they seemed to fit back smoothly into the familiar routine. As the guerrillas never

1. This and all subsequent figures for village populations are rough approximations. Village records do not include any sort of census figure. They are confined to registration of births, marriages and deaths, and the most important function they serve is to provide the basis for the annual call-up of military recruits. Moreover, a family often remains registered in a village long after it has moved away; in such instances births and deaths are likely to be omitted from the village books, and may or may not be recorded elsewhere. One must therefore depend upon informal estimates of village officials. This leaves a considerable margin for error, unless the officials consulted are unusually careful.

Cherasia
[Hill Villages]

badly needs reforestation, and that in the long run everyone, including the people of Cherasia, will benefit from re-establishment of real forests on Mount Pelion, carry any weight among the woodcutters who feel that their rights have been ruthlessly disregarded, and their traditional way of life endangered. They do not care to be farmers, and for all their ragged poverty, despise such slavish souls as are content to labor long and hard on the land.

A deep and painful irony lies in the fact that without the bureaucratic paternalism of the government most of the people of Cherasia would, in all probability, have died during the guerrilla war. What happened in Kotta, where the arm of the government did not reach, might well have happened also in Cherasia, if the inhabitants of the village had not been evacuated to Volos in 1947 and fed there – however miserably – for two and a half years by government relief. And if the population of the village had shrunk to one third of what it actually was in 1956, then it does not seem improbable that much of the present bitterness would have dissolved, because then something like the free traditional way of life would have been possible again. Governmental intervention between 1947 and 1950 prevented the operation of the brutal old-fashioned remedy for overpopulation; but governmental intervention since 1950 has not yet sufficed (and seems unlikely to suffice in the future) to provide a tolerable life for the population that has so successfully been preserved from famine, disease and violent death.

The official records of Cherasia were in considerable confusion in 1956, and I was not able to secure satisfactory figures on the present and past population of the village. The main reason for this state of affairs is that many families are registered as inhabitants of Cherasia, but do not reside there. When the villagers were sent back to their homes, everyone was supposed to go, and officially everyone did. Actually, about twenty-five

[Hill Villages]

families managed to escape official pressures and stayed in Volos, I was told, even though the records showed them back in the village. Similarly, a trickle of migration from the village into Volos since 1950 has gone unrecorded. With every sort of bureaucratic obstacle put in the way of legal transfer of residence from Cherasia to Volos, most of those who depart from the village simply neglect red tape and leave their names registered in Cherasia. They do so not by choice, since people officially registered as living in a village like Cherasia cannot claim unemployment benefits in Volos, and if they find no work, must either starve, rely upon relatives, or return to their village until better times offer a new start in town. This, of course, is the main reason why transfer of residence is made so difficult; the government could not afford to pay unemployment benefits to all the hungry men from the hills who might swarm into town if they could secure such payments.

Nevertheless, the villagers all agreed that more people were living in Cherasia in 1956 than had lived there before the war. A mean between conflicting estimates of the population came out close to 500 for 1956, and about 430 for 1940. The villagers reckon that their own local production supplies food for only two months in the year. The rest has to be bought with money earned by selling wood and charcoal, together with an occasional lamb from their flock.

Records of births and deaths were also in confusion, partly because children born in Volos to parents registered in Cherasia are supposed to be, but are not always in fact, entered in the village records. Partly, too, confusion arises from the custom of sending pregnant women to the Volos hospitals to give birth – a new departure in village custom, resulting from the wartime experience of living in the town, and facilitated by the existence of the new road. These children, too, sometimes escape the village registers, or are entered late. For what the figures may be

Cherasia

[Hill Villages]

worth, however, the records showed 45 births since 1951 as against 18 deaths, and everything I heard and observed in the village pointed to a very high rate of natural increase.

Marriages occur early. When nearly everyone lacks land that is worth much of anything, there is no tendency to wait until the new family can be assured a landed inheritance. One young man said, somewhat cynically: "What I had when I married was a donkey, an axe and a strong back. I still have all three, and three children as well." The donkey, I gathered, was his wife's contribution to the new household; the axe and the back, his own. This, it seems, is more or less normal in the village; and one can easily understand how a desire to escape the nagging poverty of the parental household would lead young men and girls into early marriage, in order at least to enjoy personal independence and the satisfactions of the marriage bed. Even though the rest of their traditional style of life seems on the verge of ruin, this still is possible. Feeling a general despair of ever being able to live decently, feeling also a certain reckless defiance of all forms of authority – including parental authority – there seems to persons such as the young man who spoke to me no reason not to marry as soon as one can find a partner.

In spite of the rebellious mood prevailing in Cherasia, the officials of the village in 1956, although supposedly elected, represented the extreme right. The president and secretary were both members of the "rich" families, possessing comparatively broad acres, and both were very emphatic and voluble in asserting that the only way to deal with Communists was to use force. Indeed, they said that peace could come to Cherasia and to Greece only when Russia was blown up by American atom bombs. How they were elected, I do not know, but I am certain the election was not a free one. Suspicion and thinly veiled hostility dominated the relation between the villagers and their official leaders.

Not all the older peasants attended school as children, or attended it for more than three or four years; and often what literacy they did have was lost in the course of time, because they had no opportunity to use it. There are no libraries in the villages or in most of the provincial centres. There is also no pattern of reading the Bible, which has maintained reading knowledge in other lands. In Greece the translation of the Bible into modern Greek was forbidden until recent years. The men, however, do read the newspapers with care, when they find them, and they have a detailed knowledge and a private opinion on international and national events and policies; politics, well understood, forms the basis of most discussions, in village or city. The satire on the Court of Petty Offences reports a case where two simple workers on the bus, engrossed in a discussion of the Spanish Civil War, use the perspiring back of another passenger as the map of Spain upon which to follow the manoeuvres of the two armies. The incident is amusing, but not surprising to Greek readers. A book on nutrition urges housewives to pattern their planning on the principles of the British monarchy, not those of the Italian monarchy, assuming knowledge of the principles underlying the difference.

In the cities, there is much intellectual activity on a high level. Many people write articles or poems or stories for their own satisfaction in their leisure time. Conversation presupposes wide reading. The inexpensive paper-bound volumes of Greek works, as well as of translations of foreign works, old and contemporary, make such reading possible. There are 10 daily papers in Athens, and a number of magazines catering to literary tastes, or addressed to simpler people. Magazines carry reports of new scientific developments throughout the world, and a number of educational articles. Those addressed to the *cosmakis*, the simple people, carry articles on child and maternal care, have cooking and sewing hints, as well as columns of personal advice. The newspapers maintain a high literacy and scholarly standard.

RELIGION

Religion and the Church are almost synonymous for the Greeks; and the Greek Orthodox religion is entirely synonymous with Greekness. When the Greek says: "Is he a Christian?" he means "Is he a Greek?" The Greek Church is the main factor in Greek continuity among emigrants nowadays. Throughout the past centuries, the Church has maintained Greek consciousness in many communities in Asia Minor, where the people spoke Turkish as a mother tongue and followed Turkish customs. The few Protestant Greeks occupy an ambiguous position and find it difficult to explain that they are Greek since they do not conform to the tradition of
